

Application Performance Management and History

AppDynamics Application Performance Management (APM)

Software Defined Business Era!!

The new world of distributed web applications has created a whole new set of challenges for those tasked with ensuring application health and performance. Modern application architectures, new technologies, and a rapid rate of change have created a perfect storm of complexity in today's applications. As a result, performance problems surface that are often difficult to identify, diagnose, and fix.

What is AppDynamics?

AppDynamics APM is a next generation application performance management solution that simplifies the management and monitoring of complex, business-critical apps. AppDynamics makes slow performing application become a thing of the past by allowing companies to monitor, troubleshoot, diagnose their production apps faster. It provides deep level application/code visibility allowing organizations to reduce their MTTR by 90%.

AppDynamics monitors your application infrastructure and gives you a code level visibility
