AppDynamics Agent and Language Support

AppDynamics Agent

AppDynamics agents are small plugins or extensions that monitor the performance of your application. It monitors the performance of application runtime, code and behavior.

AppDynamics agents are deployed on application servers, hosts, devices and containers.

Once agents are deployed they start collecting data about application, machine, web performance and report same to AppDynamics controller.

AppDynamics Supported Languages

AppDynamics supports the monitoring of the following languages

1. Java
2. .NET
3. Php
4. Node.js
5. C++
6. Python
7. Go
8. Extensions
